

Aymane LAKOUISS

RESEARCH ENGINEER IN DEEP LEARNING & COMPUTER VISION

PhD candidate and ENSEIRB-MATMECA-trained engineer in signal processing, image processing, and artificial intelligence, also holding a Master's degree in Systems Engineering for Signal and Image Processing. I am currently pursuing a PhD in artificial intelligence applied to image analysis, with a strong interest in computer vision, deep learning, and data science.

PERSONAL INFORMATION

Location: **France**
Date of birth: **June 3, 2001**
Languages: **English (Professional), French (Bilingual), Arabic, German (Basic)**

TECHNICAL SKILLS

- Python, C, C++, Matlab, SQL.
- Machine learning, Deep learning, Computer vision.
- Data (Image et signal) processing, Video processing, Google cloud, Git.
- Microsoft Excel, MS Word, MS PowerPoint.

SKILLS

- Time management.
- Problem solving.
- Autonomy.
- Teamwork.

PROFESSIONAL EXPERIENCE

PHD RESEARCHER: DEEP LEARNING & MATHEMATICS at *Institut Denis Poisson* **2025.12–2028.12**

- ◊ Development of artificial intelligence-based cosmetic image analysis methods to automate the evaluation of facial youth-related characteristics.
- ◊ Design and adaptation of deep learning models (segmentation and classification) based on CNN architectures to improve the accuracy and robustness of the analyses.
- ◊ Exploitation of analysis results to assess the effectiveness of cosmetic treatments and to study correlations between youth indicators and treatment types.

INTERNSHIP: DEEP LEARNING & COMPUTER VISION ENGINEER at *Orange Innovation* **2025.03–2025.08**

- ◊ Improvement of a deep learning model for the automatic extraction of walls, doors, and windows from architectural floor plan images.
- ◊ Optimization of model architecture, hyperparameters, and data augmentation techniques to enhance accuracy.
- ◊ Development of post-processing methods to refine vectorization, including point realignment and segment merging.

INTERNSHIP: MACHINE LEARNING & COMPUTER VISION ENGINEER at *HANDDLE SAS* **2024.03–2024.08**

- ◊ Design and development of an AI and computer vision solution for industrial data processing. Implementation of approaches to extract relevant information from production videos, combining mathematical methods and artificial intelligence to analyze and structure the data.

PROJECT INTERNSHIP (PFA) at *CORDOUAN TECH* **2023.06–2023.09**

- ◊ Development of FPGA-based embedded software for digital signal data acquisition and processing, including output generation and formatting.

EDUCATION

PHD THESIS at the *University of Orléans*. **2025–2028**

- ◊ Three years of doctoral studies and research focused on the development of deep learning-based image analysis methods to automate the evaluation of facial youth-related characteristics and to measure the effectiveness of cosmetic treatments, integrating segmentation, classification, and statistical analysis approaches.

ENGINEERING DEGREE from *ENSEIRB-MATMECA*. **2021–2025**

- ◊ Three years of higher education in a prestigious French engineering school program, within the Electronics Department, specializing in signal processing, image processing, and artificial intelligence.

MASTER'S DEGREE (ISC) from the *University of Bordeaux*. **2023–2024**

- ◊ Second year of the ISC Master's program in Systems Engineering for Image and Signal Processing, pursued concurrently with the third year of the engineering degree.

CPGE MP* at *LYDEX*. **2019–2021**

- ◊ Intensive preparatory program (CPGE) in the MPSI/MP* track at LYDEX, with advanced training in mathematics (linear algebra, complex analysis, probability, and combinatorial logic), physics, and engineering sciences.
